4. Brief description of the subject and syllabus

4.1. Brief description of the subject

This course is related with data manipulation and programming using the Python language. The main goal is to introduce main characteristics and programming style using this language of wide adoption for data analysis purposes. Once introduced the language, the course presents to students how to efficiently use the different constructs, control statements and data structures in Python. Based on this, the course describes the main characteristics of a Python framework for data storage and manipulation. All programming concepts presented in the course are accompanied with exercises in order to guarantee correct comprehension and practical knowledge.

4.2. Syllabus

1. Python programming.
 - 1.1. Introduction to Python programming.
 - 1.2. Common Python data structures.
 - 1.3. Programming in Python adopting an imperative paradigm.
 - 1.4. Programming in Python adopting a functional paradigm.
2. Data representation and manipulation.
 - 2.1. Python framework for data representation.
 - 2.2. Revision of data manipulation techniques.
3. Basic parallel constructs for data manipulation.

The independent study hours are training activities during which students should spend time on individual study or individual assignments.

Depending on the programme study plan, total values will be calculated according to the ECTS credit unit as 26/27 hours of student face-to-face contact and independent study time.

* The subject schedule is based on a previous theoretical planning of the subject plan and might go through experience some unexpected changes along throughout the academic year.

6.2. Assessment criteria

Sistema general de evaluación continua

Evaluation system during the course will consist of taking two practical exercises performed during lecture hours. The weight in the final grade of each exercise is 50% and a minimum of 5 points out of 10 is required in order to pass each exercise. At least the minimum grade (5/10) must be obtained in both exercises in order to pass the course. In case you don't want to follow the continuous evaluation process and you want to opt for the final exam in June's session, you have to warn the course coordinator in advance during the first 15 days of the course by email.

Sistema de Evaluación mediante Sólo Prueba Final

Evaluation system at the end of the course will consist of taking one written exam performed in the day scheduled for the course evaluation. The weight in the final grade of the exam is 100% and a minimum of 5 points out of 10 is required in order to pass the course.
