5. Brief description of the subject and syllabus

5.1. Brief description of the subject

The goal of this subject is to provide the student with the knowledge required for the description, analysis, and manipulation of video signals. Students are expected to gain an overview of the theory required for video signal processing, covering the fields of motion estimation and analysis, filtering, spatial and temporal segmentation, and detection and tracking of visual objects. Moreover, the last part of the subject is focused on the fundamentals of machine learning and deep learning for image-based applications. The laboratory sessions will allow the better assimilation of the theoretical concepts. Additionally, to bring theoretical knowledge into practice, many specific applications will also be presented as examples of using the studied techniques. Therefore, an applied and participatory methodology is used.

7.2. Assessment criteria

Students will be qualified through continuous evaluation by default. According to the Normativa de Evaluación del Aprendizaje de la Universidad Politécnica de Madrid, students willing to renounce to continuous evaluation must complete the Moodle task entitled "Renounce to continuous evaluation" before the 4th week of the course (deadline will be announced in Moodle).

Evaluation will assess if students have acquired all the competences of the subject. Thus, evaluation through final assessment will be carried out considering all the evaluation techniques used in continuous evaluation (EX, ET, TG, etc.), and will be celebrated in the exam period approved by Junta de Escuela for the current academic semester and year. Evaluation activities that assess learning outcomes that cannot be evaluated through a single exam can be carried out along the semester.

Extraordinary examination will be carried out exclusively by the final assessment method.

For any evaluation modality, the student will overcome the subject when a grade higher or equal to 50% of the total score is obtained.

Performing all laboratory sessions, as well as obtaining an overall qualification equal or greater to 50% in their overall evaluation, is required to pass the course in any evaluation modality.

Obtaining a qualification equal or greater to 50% in the overall evaluation of the exams is required to pass the course through final assessment or extraordinary examination modalities.

Regular call: Continuous evaluation

The final score is obtained as follows:

FINAL SCORE = 20% classroom assessment + 40% lab reports + 40% exams

Regular call: Final assessment

The final score is obtained as follows:

FINAL SCORE = 60% final exam + 40% lab reports

Extra call:

The final score is obtained as follows:

FINAL SCORE = 60% final exam + 40% lab exam
