5. Brief description of the subject and syllabus

5.1. Brief description of the subject

Modern communication systems require the use of advanced signal processing techniques for the implementation of functions such as modulation / demodulation, channel compensation, suppression of interferences, etc.

In order to perform these functions, advanced signal processing techniques combined with radio software systems are used to implement these techniques easily.

The subject is focused on the study of the most advanced techniques of signal processing and its application to modern software radio systems. It is based mainly on the use of the MATLAB / SIMULINK program and radio software systems of National Instruments.

9.1. Other information about the subject

The final focus of the subject is eminently practical. Many practices are carried out based on radio software systems.

TEACHING IN TELE-TEACHING MODE

In case the sanitary conditions do not allow it, the subject may be taught in the Tele-Teaching modality with the following characteristics:

-Theoretical teaching would be taught 100% in the Tele-teaching modality. For this, the MICROSOFT TEAMS platform will be used.

-Labs will be carried out using free software and Matlab software licensed by the UPM that the student can use. For radio software practices, a Hardware SDR would be delivered to each student to carry out the practices remotely.
