5. Brief description of the subject and syllabus

5.1. Brief description of the subject

The Pandemics, and previously the Great Recession, have posed big challenges for conventional economics, and it has not stood well in the trial. Mainstream economics, what is taught in economics faculties and explained in textbooks, has not provided us with the means to anticipate, deal with and repair damages caused.

The proposal is to reconsider the foundations and give way to different perspectives and approaches that have been held as little more than singularities until now from the ranks of mainstream economics. Some of them are here long ago, but only now are gaining visibility and acceptance. Post-keynesian economics, behavioral economics, complexity economics, econophysics and evolutionary economics are some of the best regarded and promising proposals.

In this course we will examine the basics of complexity and evolutionary economics. With a duly warning: we do not have the answers yet, and there is a long journey ahead.
