### 2.1. Faculty members with subject teaching role

<b>Name and surname</b>	<b>Office/Room</b>	<b>Email</b>	<b>Tutoring hours *</b>
Luis Miguel Pozo Coronado	2003	lm.pozo@upm.es	Sin horario. Office hours will be published before the beginning of the term, both in moodle and on the bulletin boards

Ana Isabel Lias Quintero (Subject coordinator)		anaisabel.lias@upm.es	- -
---	--	-----------------------	-----

\* The tutoring schedule is indicative and subject to possible changes. Please check tutoring times with the faculty member in charge.

### 3. Prior knowledge recommended to take the subject

---

#### 3.1. Recommended (passed) subjects

The subject - recommended (passed), are not defined.

#### 3.2. Other recommended learning outcomes

- Understanding and writing simple mathematical proofs.
- Handling modular arithmetics and matrix calculus with ease.

### 4. Skills and learning outcomes \*

---

#### 4.1. Skills to be learned

CB1 - Capacidad para la resolución de los problemas matemáticos que puedan plantarse en la ingeniería. Aptitud para aplicar los conocimientos sobre: algebra, cálculo diferencial e integral y métodos numéricos; estadística y optimización

CB3 - Capacidad para comprender y dominar los conceptos básicos de matemática discreta, lógica, algorítmica y complejidad computacional, y su aplicación para el tratamiento automático de la información por medio de sistemas computacionales y su aplicación para la resolución de problemas propios de la ingeniería.

CC1 - Capacidad para diseñar, desarrollar, seleccionar y evaluar aplicaciones y sistemas informáticos, asegurando su fiabilidad, seguridad y calidad, conforme a principios éticos y a la legislación y normativa vigente.

CC6 - Conocimiento y aplicación de los procedimientos algorítmicos básicos de las tecnologías informáticas para diseñar soluciones a problemas, analizando la idoneidad y complejidad de los algoritmos propuestos

CC7 - Conocimiento, diseño y utilización de forma eficiente los tipos y estructuras de datos más adecuados a la resolución de un problema

CT1 - Análisis y síntesis: Descomponer la información en unidades más pequeñas separando los componentes fundamentales de los no relevantes e identificando las relaciones existentes entre ellos. Síntesis: Combinar información para construir un todo a partir de las entidades previamente analizadas.

CT12 - Uso de tecnologías de la información y las comunicaciones : Usar las tecnologías de la información y las comunicaciones en el ámbito de la ingeniería.

CT2 - Resolución de problemas: Identificar, analizar y definir los elementos significativos que constituyen un problema para resolverlo con criterio y de forma efectiva

CT4 - Comunicación escrita: Relacionarse eficazmente con otras personas a través de la expresión clara de lo que se piensa, mediante la escritura y los apoyos gráficos.

## 4.2. Learning outcomes

RA296 - Aplica los principales resultados de la teoría de números a la Criptología, cifrando y descifrando con los criptosistemas RSA y ElGamal

RA297 - Utiliza adecuadamente software para la resolución de problemas de codificación de la información, describiendo con precisión los protocolos utilizados

RA291 - Utiliza los distintos tipos de codificación de la información según el objetivo perseguido (corregir errores, encriptar información o comprimirla)

RA295 - Determina la complejidad computacional de algoritmos sencillos que involucren operaciones aritméticas elementales

RA299 - Comprime ficheros, usando códigos compresores adecuados

RA290 - Conoce y aplica protocolos de autenticación (firma digital) e intercambio de claves basados en criptosistemas de clave pública

RA292 - Conoce y aplica test de primalidad deterministas y probabilísticos

RA294 - Distingue criptosistemas de clave pública y clave privada. Cifra y descifra utilizando los criptosistemas de traslación, afín y matricial afín

RA298 - Codifica, detecta y corrige errores utilizando los códigos lineales

RA293 - Resuelve problemas abiertos, considerando varias alternativas posibles, valorándolas de forma razonada y argumentando su elección según los criterios especificados para su resolución. Para la alternativa elegida, identifica la información necesaria para su solución, elabora y desarrolla una estrategia eficaz para encontrarla, y

presenta de forma clara el resultado y las conclusiones pertinentes

RA335 - Analiza y aplica el algoritmo ElGamal para el cifrado y el descifrado de datos

RA334 - Analiza y aplica el algoritmo RSA para el cifrado y el descifrado de datos.

\* The Learning Guides should reflect the Skills and Learning Outcomes in the same way as indicated in the Degree Verification Memory. For this reason, they have not been translated into English and appear in Spanish.

## 5. Brief description of the subject and syllabus

---

### 5.1. Brief description of the subject

The subject of this course is the study of the different possibilities to encode the information numerically, depending on the intended goal: conciseness (data compression), integrity (error detection codes) or security (cryptography).

The general objectives are:

- a) Understanding the different mathematical concepts and tools underlying the models under consideration; and
- b) Implementing these models, with special attention to efficiency and security issues.

### 5.2. Syllabus

1. Introduction to Information Coding. Cryptology
  - 1.1. Trasmisión of Information
  - 1.2. Types of codes
  - 1.3. Cryptography and cryptosystems
  - 1.4. Private key cryptosystems
  - 1.5. Cryptanalysis
2. Computational complexity
  - 2.1. Problems and algorithms
  - 2.2. Complexity of elemental arithmetic operations

- 2.3. Classification of problems regarding its complexity
- 3. Number theory
  - 3.1. The multiplicative group of integers mod  $n$
  - 3.2. Euler's totient function
  - 3.3. Euler and Fermat Theorems
  - 3.4. Order of an element. Primitive root
  - 3.5. Discrete logarithm
- 4. Public key cryptosystems
  - 4.1. Diffie- Hellman key exchange protocol
  - 4.2. RSA cryptosystem
  - 4.3. ElGamal cryptosystem
  - 4.4. Digital signature
  - 4.5. Other applications
- 5. Primality tests
  - 5.1. Deterministic tests: Erathostenes' sieve and trial division
  - 5.2. Probabilistic tests: Fermat, Miller and Miller-Rabin
- 6. Compression codes. Error-detection codes
  - 6.1. Compression with variable-length codes: Huffman codification
    - 6.1.1. Introduction to information theory
    - 6.1.2. Huffman codification
    - 6.1.3. Minimal variance Huffman codification
  - 6.2. Error-detection with Cyclic redundancy codes
    - 6.2.1. Linear codes
    - 6.2.2. Polynomials. CRC

## 7.2. Assessment criteria

### Continuous evaluation:

Online tests: One for each chapter; 10 multiple choice questions. If the result is at least 7/10, the test will add 2% to the final grade, **up to 10%** altogether.

Written tests: They take place out of lecture hours. The students must answer to questions regarding subject contents (including definitions, statements of theorems, exercises and problems). At least 70% of assessment will correspond to basic contents. Language precision and rigour in the results will be demanded.

Lab projects: 5 lab projects must be done along the term. Work will be done in pairs. The contribution of each project to the final grade will be 6%. Project assessment: Procedures, 50% (efficiency, clarity, documentation); solved problems, 40%; mathematical rigour, elegance, language precision, 10%.

Lab test: A validation test will take place in the lab, where some problems must be solved by using the functions programmed in the lab projects. This test will weigh a 20% of the total grade.

### Final exam only, and july examination session

Students choosing the final exam option must apply for it before December 1st, using the tool in Moodle. Final exam will take place as scheduled by the school administration. The exam will have two parts: a written test regarding subject contents (including definitions, statements of theorems, exercises and problems), and a lab test where some problems must be solved by means of the functions listed in the lab projects (which each student must do in advance and bring to the exam). Each part will weigh 70% and 30% of the final grade, respectively. The function list and specifications will be published in Moodle. In addition, this exam can be used for updating the grade of any of the previous partials, using the proper weighting.

---

## Addendum

Developing the UPM Evaluation Policy, subject teachers state that:

1. For a student to be examined on a date other than the scheduled exam, it must necessarily be verified the following circumstances:

(a) The reason the student is unable to attend the exam must be overselling and force majeure, legally established or sufficiently estimated by the Head of Studies. The concept of force majeure must be understood as the existence of an unpredictable external cause affecting the sufferer by preventing the fulfilment of an obligation.

(b) In these cases, in order for the test to take effect on a different date and time than the scheduled one, affected students must notify the coordinator, via email or telephone, no later than 48 hours and send the documents that prove the reason he/she were unable to attend. Otherwise, the test will not be re-tested.

2. If a copy is detected on any ongoing evaluation test, the students involved will have zero rating in the ordinary call. In addition, they will need to conduct a review defense in a oral procedure in the extraordinary call. In the event of a copy in the extraordinary examination, the facts will be reported to the Rector for the opening of a disciplinary file.
