1. Description

1.1. Subject details

Name of the subject	93000921 - Radiofrequency Optimization Techniques
No of credits	3 ECTS
Type	Optional
Academic year of the programme	First year
Semester of tuition	Semester 1
Tuition period	September-January
Tuition languages	English
Degree programme	09AT - Master Universitario en Teoria de la Señal y Comunicaciones
Centre	09 - Escuela Tecnica Superior De Ingenieros De Telecomunicacion
Academic year	2023-24

2. Faculty

2.1. Faculty members with subject teaching role

Name and surname	Office/Room	Email	Tutoring hours *
Jaime Esteban Marzo (Subject coordinator)	B-420	jaime.esteban@upm.es	Sin horario. Booked appointment by e-mail is encouraged.

* The tutoring schedule is indicative and subject to possible changes. Please check tutoring times with the faculty member in charge.

3. Prior knowledge recommended to take the subject

3.1. Recommended (passed) subjects

- Fundamentos De OptimizaciÓn

3.2. Other recommended learning outcomes

- Circuit Theory, Matrix representation of multiports, Transmission lines.
- Linear systems, Fourier transform and FFT.
- A working knowledge of MATLAB.
- Fundamentals of microwave passive and active circuits.

4. Skills and learning outcomes *

4.1. Skills to be learned

CB06 - Poseer y comprender conocimientos que aporten una base u oportunidad de ser originales en el desarrollo y/o aplicación de ideas, a menudo en un contexto de investigación

CB07 - Que los estudiantes sepan aplicar los conocimientos adquiridos y su capacidad de resolución de problemas en entornos nuevos o poco conocidos dentro de contextos más amplios (o multidisciplinares) relacionados con su área de estudio

CB08 - Que los estudiantes sean capaces de integrar conocimientos y enfrentarse a la complejidad de formular juicios a partir de una información que, siendo incompleta o limitada, incluya reflexiones sobre las responsabilidades sociales y éticas vinculadas a la aplicación de sus conocimientos y juicios

CB09 - Que los estudiantes sepan comunicar sus conclusiones y los conocimientos y razones últimas que las sustentan a públicos especializados y no especializados de un modo claro y sin ambigüedades

CB10 - Que los estudiantes posean las habilidades de aprendizaje que les permitan continuar estudiando de un modo que habrá de ser en gran medida autodirigido o autónomo

CE01 - Analizar y aplicar técnicas para el diseño y desarrollo avanzado de equipos y sistemas, basándose en la teoría de la señal y las comunicaciones, en un entorno internacional

CE03 - Valorar y contrastar la utilización de las diferentes técnicas disponibles para la resolución de problemas reales dentro del área de teoría de la señal y comunicaciones.

CT01 - Capacidad para comprender los contenidos de clases magistrales, conferencias y seminarios en lengua inglesa

CT04 - Capacidad para trabajar de forma efectiva como individuo, organizando y planificando su propio trabajo, de forma independiente o como miembro de un equipo

CT06 - Capacidad para emitir juicios sobre implicaciones económicas, administrativas, sociales, éticas y medioambientales ligadas a la aplicación de sus conocimientos

4.2. Learning outcomes

RA3 - Conocer técnicas avanzadas de optimización para equipos y dispositivos de RF.

* The Learning Guides should reflect the Skills and Learning Outcomes in the same way as indicated in the Degree Verification Memory. For this reason, they have not been translated into English and appear in Spanish.

5. Brief description of the subject and syllabus

5.1. Brief description of the subject

The analysis and design of radiofrequency circuits and subsystems by means of electromagnetic and circuit simulators requires solving global optimization problems, often of noisy and costly functions. We will review the better-known heuristic methods, such as simulated annealing, genetic algorithms and evolution strategies. The use of surrogate models will be also dealt with, by reviewing the Space Mapping technique.

Because of the eminently practical character of the course, all these topics will be illustrated by practical projects, where students will optimize different radiofrequency subsystems and components.

5.2. Syllabus

1. Introduction

1.1. Optimization software. Matlab, toolboxes and functions.

1.2. Examples and exercises.

2. RF and microwave network optimization

2.1. Modelling. Definition of the optimization problem. The search space.

2.2. Objective functions. Constraints.

2.3. Yield optimization. Monte Carlo analysis. Latin hypercube.

2.4. Examples and exercises.

3. Nonlinear microwave network analysis

3.1. Linear and nonlinear subnetworks. Parametric description of nonlinear devices.

3.2. Harmonic Balance method.

3.3. Balance equation. Solution by optimization. The use of the Jacobian.

3.4. Autonomous circuits.

3.5. Examples and exercises.

4. Global optimization. Noisy and costly functions.

4.1. Computational effort and numerical error in electromagnetic simulators.

4.2. Simulated annealing.

4.3. Genetic algorithms and evolution programs.

4.4. Other heuristic techniques.

4.5. Examples and exercises.

5. Surrogate models and the Space Mapping technique

5.1. Introduction to surrogate models.

5.2. Space mapping for the optimization of microwave circuits.

5.3. Examples and exercises.

6. Schedule

6.1. Subject schedule*

Week	Classroom activities	Laboratory activities	Distant / On-line	Assessment activities
1				
2				
3				
4				
5				
6				
7				
8	Optimization software. Matlab, toolboxes and functions. Duration: 01:00 Lecture	1.2. Examples and exercises Duration: 00:30 Problem-solving class 2.4. Examples and exercises Duration: 01:30 Problem-solving class		Short project Individual work Continuous assessment Not Presential Duration: 01:30
9	Yield optimization. Monte Carlo analysis. Latin hypercube. Duration: 01:00 Lecture Nonlinear Network Analysis. Linear and nonlinear subnetworks. Parametric description of non-linear devices. Harmonic Balance method. Duration: 01:00 Lecture	2.4. Examples and exercises Duration: 01:00 Problem-solving class 3.5. Examples and exercises Duration: 01:00 Problem-solving class		
10	Balance equation. Solution by optimization. Use of the Jacobian. Duration: 01:00 Lecture	3.5. Examples and exercises Duration: 02:00 Problem-solving class		Short project Individual work Continuous assessment Not Presential Duration: 02:00 Short quiz or exercise Written test Continuous assessment Presential Duration: 01:00
11	Global optimization. Noisy and costly functions. Computational effort and numerical error in electromagnetic simulators. Global optimization. Duration: 00:30 Lecture Simulated annealing.	3.5. Examples and exercises Duration: 01:30 Problem-solving class 4.5. Examples and exercises Duration: 01:00 Problem-solving class		Short project Individual work Continuous assessment Not Presential Duration: 01:00

	Duration: 01:00 Lecture		
12	Genetic algorithms and evolution programs. Duration: 01:30 Lecture	4.5. Examples and exercises Duration: 01:30 Problem-solving class	Short quiz or exercise Written test Continuous assessment Presential Duration: 01:00
13	Other heuristic techniques. Duration: 00:45 Lecture Surrogate models and the Space Mapping Technique. Introduction to surrogate models. Space mapping for microwave circuits. Duration: 02:00 Lecture	4.5. Examples and exercises Duration: 01:15 Problem-solving class	Short project Individual work Continuous assessment Not Presential Duration: 01:00
14		5.3. Examples and exercises Duration: 04:00 Problem-solving class	Short project Individual work Continuous assessment Not Presential Duration: 02:30
15			
16			
17			Short questions exam Written test Final examination Presential Duration: 01:00 Short project Individual work Final examination Presential Duration: 02:00

Depending on the programme study plan, total values will be calculated according to the ECTS credit unit as 26/27 hours of student face-to-face contact and independent study time.

* The schedule is based on an a priori planning of the subject; it might be modified during the academic year, especially considering the COVID19 evolution.

7. Activities and assessment criteria

7.1. Assessment activities

7.1.1. Assessment

Week	Description	Modality	Type	Duration	Weight	Minimum grade	Evaluated skills
8	Short project	Individual work	No Presential	01:30	15%	0 / 10	CB08 CB09 CT01 CB07 CB06 CT04 CE01 CT06 CE03 CB10
10	Short project	Individual work	No Presential	02:00	20%	0 / 10	CB09 CT01 CB07 CB06 CT04 CE01 CT06 CE03 CB10 CB08
10	Short quiz or exercise	Written test	Face-to-face	01:00	10%	0 / 10	CB08 CT01 CE01 CE03
11	Short project	Individual work	No Presential	01:00	10%	0 / 10	CB08 CT01 CB07 CB06 CT04 CE01 CT06 CE03 CB10 CB09

12	Short quiz or exercise	Written test	Face-to-face	01:00	10%	0 / 10	CE03 CT01 CE01
13	Short project	Individual work	No Presential	01:00	10%	0 / 10	CB08 CB09 CT01 CB07 CB06 CT04 CE01 CT06 CE03 CB10
14	Short project	Individual work	No Presential	02:30	25%	0 / 10	CB08 CB09 CT01 CB07 CB06 CT04 CE01 CT06 CE03 CB10

7.1.2. Global examination

Week	Description	Modality	Type	Duration	Weight	Minimum grade	Evaluated skills
17	Short questions exam	Written test	Face-to-face	01:00	20%	5 / 10	CT01 CB06 CE01 CE03
17	Short project	Individual work	Face-to-face	02:00	40%	5 / 10	CB08 CB09 CT01 CB07 CB06 CT04 CE01 CT06 CE03 CB10

7.1.3. Referred (re-sit) examination

Description	Modality	Type	Duration	Weight	Minimum grade	Evaluated skills
Short questions exam	Written test	Face-to-face	01:00	20%	5 / 10	CB06 CE01 CE03 CT01
Project	Individual work	Face-to-face	02:00	80%	5 / 10	CB08 CB09 CT01 CB07 CB06 CT04 CE01 CT06 CE03 CB10

7.2. Assessment criteria

Assessment will be progressive, and will consist of a series of short projects (80% of the final grade), along with short quizzes (20%).

The completion of the projects is essential to develop skills CE01, CE03 and, above all, CT04 and CB06, so 50% of them are considered non-recoverable activities.

Progressive assessment

A series of five short projects will be assigned throughout the semester that involve the development of Matlab computer code to simulate and optimize basic RF circuits or subsystems. In addition, two short tests or exercises will be proposed, to be carried out during class time.

The optional global exam will make it possible to recover the grade of the short tests (20%) and, by means of a new short project, part of the grade of the projects failed or not submitted during the course (up to 40%). It is not possible to recover the rest of the grade of the short projects in the final exam due to their aforementioned non-

recoverable nature.

Extraordinary examination

The extraordinary exam will consist of a short quiz (20%) and a project (80%). The statement of the extraordinary examination project will be provided three school days in advance.

Evaluation will assess if students have acquired all the competences of the subject. Thus, evaluation through global or extraordinary examination will be carried out considering all the evaluation techniques used in progressive evaluation.
