6.2. Assessment criteria

Regular call

This section covers the evaluation criteria for this course. All the students enrolled in this course will be subject, by default, to the progressive evaluation scheme. For this reason, this learning guide will be focused on this approach and it details all the evaluation activities in the timeline of the course.

The evaluation of the course will take into account both the theoretical knowledge acquired in the lectures and the knowledge assimilated after the practical work throughout the course.

This course will be evaluated in two ways:

- **Final exam.** At the end of the course, there will be a final exam covering all the contents presented during the course.
- **Practical work.** This assignment will be presented during the course, at class, in the date detailed in the timeline of the course. There will be some classes devoted to this assignment, where the students will count with the support of the instructor, which should be, in general, complemented with autonomous work by the student. The deadline for the assignment will be fixed at the end of the term, as shown in the timeline of the course. No late assignments will be accepted for evaluation. The delivery of the assignment is considered a mandatory activity in order to pass the course. Moreover, only its delivery will entitle the student to take the evaluation of the practical part,

The final grade for this course will be computed as follows: 20% for the final exam 80% for the assignment. To pass the course, a minimum score of 4 is required for each of these parts and a grand mean of 5 is needed combining these two items of evaluation.

Extraordinary call

If the students do not succeed in this course, they will have to repeat those parts not passed in the ordinary evaluation. There will be a new call for the final exam as well as a new deadline for the assignment with the same requirements as in the regular call.
