### 3. Skills and learning outcomes *

#### 3.1. Skills to be learned

- **CE-DIPO01** - Capacidad para conceptualizar, diseñar y desarrollar la interacción persona-ordenador de productos y servicios innovadores
- **CE-DIPO03** - Habilidad para hacer conexiones entre los deseos y necesidades del consumidor o cliente y lo que la tecnología puede ofrecer
- **CE-DIPO04** - Capacidad para analizar las necesidades de información que se plantean en un entorno y llevar a cabo en todas sus etapas el proceso de diseño centrado en el usuario
- **CG03** - La capacidad de usar la lengua inglesa de manera competente, es decir, con capacitación para tareas complejas de trabajo y estudio.

#### 3.2. Learning outcomes

- **RA6** - Communicate and describe the results of the stages of the user-centred design process
- **RA8** - Run different qualitative techniques to study the context of use (user, tasks, and environment) of an interactive system
- **RA7** - Understand how to design an interactive system using a user-centred approach
- **RA9** - Analyse qualitative data to specify the design requirements related to the context of use
- **RA38** - Understand how to process information and what are the limitations and diversity of human beings in their interaction with computer systems
- **RA13** - Understand methods to communicate the design intent
- **RA10** - Understand the main heuristics that have to be considered to design a usable interactive system
- **RA37** - Understand the term usability and its attributes
- **RA39** - Understand the user-centred approach
* The Learning Guides should reflect the Skills and Learning Outcomes in the same way as indicated in the Degree Verification Memory. For this reason, they have not been translated into English and appear in Spanish.

4. Brief description of the subject and syllabus

4.1. Brief description of the subject

This course presents: first, an overview and introduction to the field of human-computer interaction and usability; second, an introduction to the methods to elicit user requirements; and third, the course will emphasize the importance of paying attention to user needs and cognitive functioning in order to design usable systems.

This course also provides practical knowledge of how to use well-known and established HCI design methods as well as theoretical knowledge of how to think and reason on them during the design process. Interaction design will be approached from the perspective of user-centred design, presenting specific techniques to explore and refine the behaviour of products and services.

4.2. Syllabus

1. Introduction and conceptualization
   1.1. Introduction of Human Computer Interaction
   1.2. Understanding basic concepts of HCI
2. Usability
4. Interaction styles and devices
5. User Centred Design Process
6. Regulatory and Ethical aspects
7. User research - Context of use
   7.1. Analysis of the context of use
      7.1.1. Data collection techniques
      7.1.2. Question formulation
      7.1.3. Interviewing users
      7.1.4. Contextual inquiry
   7.2. Qualitative analysis
7.2.1. Coding qualitative data

7.2.2. Validating results from qualitative analysis

7.3. Specification of the context of use

8. Interaction design

8.1. Design heuristics

9. Low-fidelity prototyping

9.1. Paper-based low-fidelity prototype

9.2. Software-based low-fidelity prototype

10. Adoption and acceptance models
## 5. Schedule

6.2. Assessment criteria

Grading criteria

The projects will be evaluated during their iterative development during the course. Grading of students will be based on:

1) Quality of the oral communication skills.

2) Ability to debate

3) Ability to understand concepts.

Progressive evaluation system

A progressive evaluation is carried out through a project (broken down into a set of activities) and two presentations. Both are carried out in a team, and weigh, respectively, 55% and 15% of the final grade. Completion of the project is mandatory during the teaching period, so none of its submissions can be recovered either in the global evaluation or in the extraordinary one, since all the assignments have a dependency on the previous one and therefore cannot be redone individually. Due to this dependency, the submissions of the project have a minimal grade of 5.

Oral presentations are performed in the classroom, and then cannot be redone.

The remaining 30% of the final grade will be assessed through a final written exam in which it will be evaluated that the student has adequately assimilated the concepts explained in the subject, as well as their critical spirit and capacity for analysis focused on said concepts. The exam will take place on the day of the official exam of the subject, so it will not be possible to recover it in the global evaluation (since they coincide in time). As this exam is the only individual assessment, it is also required to obtain a minimal grade of 5 to pass the subject.
Global evaluation process

The **global evaluation** of the subject consists of carrying out a final written exam (30% of the final grade) in which it will be evaluated that the student has adequately assimilated the concepts dealt with in the subject, as well as their critical spirit and capacity for analysis focused on said concepts. This examination coincides with the one carried out by means of progressive evaluation. The rest of the evaluation activities are not recoverable, and therefore must be carried out during the teaching period. As this exam is the only individual assessment, it is also required to obtain a minimal grade of 5 to pass the subject.

Extraordinary evaluation

The **extraordinary evaluation** of the subject consists of carrying out a final written exam in which it will be evaluated that the student has adequately assimilated the concepts and abilities explained in the subject, as well as their critical spirit and capacity for analysis focused on said concepts. This exam weighs 100% of the final grade.

7. Teaching resources

7.1. Teaching resources for the subject

</tbody>
</table>
8. Other information

8.1. Other information about the subject

The objective of this course is to learn methods and technique to design interactive systems that have an adequate degree of usability and accessibility. Taking this into account, and the UN recommendations on SDGs, this subject deals with competencies related to the following SDGs:

- **Goal 4 Quality education** - Ensure inclusive, equitable and quality education and promote lifelong learning opportunities for all. To facilitate this objective, interactive systems designed for teaching, which are increasingly important in society, must meet usability and accessibility requirements discussed in the subject.

- **Goal 8 Decent work and economic growth** - Promote inclusive and sustainable economic growth, employment and decent work for all. Today many jobs depend on the use of interactive systems. These systems must meet usability and accessibility requirements to promote equal opportunities at work.

- **Goal 10 Reduced inequalities** - To favor the inclusion of all people in society, interactive systems that are designed for all types of activities, including citizen participation, culture and leisure, must meet the usability and accessibility requirements covered in the subject.
NOTE 1: What is included in this guide will be applied if and only if the course has the necessary human and material resources to be able to apply what is set forth here. In case of not having the necessary means, both the teaching and the way of evaluating the students will be adapted to the available means.

NOTE 2: Please bear in mind tutoring hours may change along the course. Please, ask for an appointment in advance.

NOTE 3: Please note that concrete dates for the assignments will be informed at the beginning of the course.
