Software

Research and innovation areas

- Tecnologías digitales, Inteligencia Artificial, ciberseguridad, 5G, robótica

Where?

Artificial Intelligence R&I Centre (AI.nnovation Space) Ontology Engineering Group

Software description

A tool directed at validating ontologies. OOPS! specifically makes it possible to analyse ontologies to detect some of the errors that usually come up during ontology development. In this sense, OOPS! carries out diagnostics on the ontology independently of its domain or modelling requirements. Using the diagnostics, OOPS! generates a series of notifications, indicating which elements errors may be being committed in.
