

## Wafer, and other materials, Polishing Service

ISOM Science and Technology Service within the framework of the field of processing techniques research

## Contact information

**Address:** ISOM, Universidad Politécnica de Madrid, E.T.S.I. Telecomunicación. Edificio López Araújo, Avenida Complu

**Phone number:** 910672073

**Website:** [isom.upm.es](http://isom.upm.es)

**Email:** [miguel.montes@upm.es](mailto:miguel.montes@upm.es)

## Technological Offers type

Technological scientific services

## Research and innovation areas

- Industry, Materials and Circular Economy
- Science For Engineering and Architecture

## ODS

**Available from:** 2015

## Where?

ISOM Semiconductor Devices Group University Optoelectronics and Microtechnology Systems Institute

Keywords: | [Polisher](#) | [processing techniques](#) | [sander](#)

## Sander/Polisher for Wafers and other materials used in electronics

The sander/polisher at the ICTS in the ISOM can sand or polish various materials used in the field of microelectronics. By changing the type of sanding, mirror-type polishing can be achieved in Wafers and on glass. The polishing pads go from tens of micron to hundreds of nanometres.

## Description of the services offered

Two types of service are offered:

- Sample polishing or sanding. The user sends a sample to be polished and ISOM staff do the polishing and analyse its roughness before giving the sample to the client.
- Training needed to use the polishing or sanding equipment for any kind of user. Once the training has been given, the user can polish their samples.

---

**Needs requested and applications**

Many processes in microelectronics need a highly polished, wafer-type, surface which will be coated with a photoresist afterwards. Polishing is also critical in optical systems in order to reflect a laser, or other light source, properly.

---

**Sector or area of application**

Microelectronics, Optics.

---

**Differential skills**

ISOM staff work in a White Room where the production conditions are very strict when it comes to dust particles and impurities. Furthermore, the care taken and the quality of the polishing are of the highest quality.

---

**Previous references for provision of services**

The equipment has been used by the company MEDLUMICS to polish lasers and optical systems.

---

**Where it is**

In the ISOM. HTSE for Telecommunications Edificio C
